**DETAILED ACTION**

***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-8 and 13-19, drawn to thermal history sensor based on opacity, classified in class 374, subclass 161.
  - II. Claims 9-12, drawn to thermal history sensor, classified in class 374, subclass 102.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions II and I are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions: Invention I requires to be exposed to the particular (400K) temperature, requires a set of stressors and requires to respond to the set of stressors with different changes of opacity of the substrates, while Invention II requires the attachment means and that the reflective surface is platinum, not required by Invention I.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
